## Edge Controllers featuring PACEdge™ Software

### Designed for Real-World Demands

Emerson's PACSystems RX3i CPE400 and CPL410 edge controllers are flexible and high-performance control systems ideal for a range of applications, including water wastewater, metro, industrial steam, automotive, chemical, oil and gas, discrete manufacturing and modular machine designs. These diverse applications require a compact controller that delivers the high performance and flexibility needed to run application-specific control reliably.

The RX3i CPE400 and CPL410 compliment real-time deterministic control with embedded PACEdge software, delivers near real-time advice through market analysis, fleet and enterprise data, or asset/process knowledge to optimize business outcomes.

RX3i Edge Controllers provide an open platform for reliable, secure communication and analytics using either cloud-based or edge-based apps. Controls can now be augmented to dynamically influence business outcomes, generate new forms of revenue, and improve profitability.

### Reliable, High-Speed Performance

The RX3i CPE400 and CPL410 run on a real-time operating system, allowing them to deliver reliable and secure industrial applications. They offer premier, high-speed performance and secure data handling for any multi-disciplined control system. A generous working memory accommodates large programs and extensive data storage. The quad-core high-speed microprocessor executes programs faster than ever before. They support industry-standard PROFINET® with I/O update rates as fast as 1ms and up to 64 devices. With Ethernet interface rates up to 1 Gbps, the RX3i CPE400 and CPL410 are built for rapid, reliable data interchange.

### Industrial Internet Enabled with PACEdge Software

Emerson Edge Controllers use real-time hypervisor technology to run real-time deterministic control applications concurrently with the PACEdge software in a reliable and cooperative manner without impacting each other. The PACEdge Software, including PACEdge + Movicon Connex (CPE400) or PACEdge + Movicon WebHMI (CPL410) enables customers to not only connect to their preferred cloud service, but also allows them to collect, store, analyze, and visualize data next to the control system to optimize their processes for better outcome without compromising their high-performance deterministic control requirements. Fleet-level analytics and access to real-time information enabled by the RX3i CPE400 and CPL410 are critical to OEMs and machine builders looking to get the most from their equipment fleets, minimize travel and maintenance costs, and quickly create and deploy intellectual property to differentiate their machines.

## Advanced Security

Industrial controls are constant targets of cyber threats. We understand the risk involved in securing our customers' most important assets. We believe in defense-in-depth architectures to secure assets from potential cyber threats.

With Achilles Level 2 Certification, the RX3i CPE400 and CPL410 have been developed to be secure by design, incorporating technologies such as Trusted Platform Modules, and secure boot. A centralized configuration allows encrypted firmware updates to be executed from a secure central location. A broad suite of cyber-security technology and tools help prevent unauthorized updates while built-in security communication protocols help protect against man-in-the-middle and denial-of-service attacks.

## Flexible Redundancy Tailored to Your Needs

Building on our market leadership and decades of expertise in mission-critical backup power and critical cooling solutions, PACSystems High Availability with PROFINET is a flexible and intelligent high-availability control system that helps ensure maximum uptime while reducing total cost of ownership (TCO) through easier configuration, operation, and maintenance.

Built on a scalable, synchronized, hotstandby redundancy control platform, the PACSystems High Availability on RX3i CPE400 and CPL410 solutions provides uninterrupted control of your applications and processes with total transparency.
